

Part I: Read and Respond

No Part I this time—we have enough left to talk about with series!

Part II: Exercises (prepare for class for Wednesday, February 26)

Also no Part II this time. We'll look at the series in Exercise 2.7.2 together, do the presentations we didn't get to Wednesday, and do some other series things before the Chapter 2 quiz.

Part III: Problems (due Wednesday? Friday? after break at the beginning of class)

See email for survey about due dates.

1. (I) We're halfway through the semester, so it's a good time to reflect on your learning. To inspire you in your reflection, read [The View From Here: Confronting Analysis](#) and then answer the following questions:
 - Which parts of the article resonate with you? Why?
 - Which parts of the article don't resonate with you? Why?
 - In what ways have you seen yourself growing as a mathematician so far this semester in Real Analysis I?
 - In what areas do you hope to see more growth for yourself in the remainder of the semester in this class? How do you plan to create space for that growth to happen?
 - What's a topic that you struggled with for awhile and feel like you've made real progress on understanding? What contributed to that progress?

Reminder

We'll have a Chapter 2 quiz on Friday, February 28.
